

HIMANSHU SONI

Frontend Engineer

+91-6386333099 himanshu.soni.web@gmail.com Github LinkedIn

PROFILE SUMMARY

Frontend Engineer with 2.5+ years building high-performance, scalable web apps using **React** and **TypeScript**. Improved load time by **30%**, reduced UI defects by **18%**, and built **reusable component systems**. Expert in **state management**, **performance optimization**, and delivering **responsive, accessible (a11y), cross-browser compatible** UIs for high-traffic platforms.

PROFESSIONAL EXPERIENCE

Tata Consultancy Services Pvt Ltd
Systems Engineer

08/2023 – Present | Mumbai, Maharashtra

- Developed scalable and reusable **React.js + TypeScript components** for a high-traffic media platform using **component-driven architecture**, improving development velocity and UI consistency.
- Managed complex client-side state using **Redux Toolkit and Context API** for multi-step workflows (forms, filters, dynamic rendering), improving UI responsiveness and maintainability.
- Implemented **performance optimization techniques** including **code splitting, lazy loading, memoization, and asset optimization**, reducing average page load time by **30%** on low-bandwidth devices.
- Integrated and handled **REST API data flows** with robust **error handling, loading states, and edge-case management**, reducing frontend-related production defects by **18%** and improving data reliability.
- Refactored legacy UI into **reusable components and shared utilities**, eliminating duplicate logic and improving engineering efficiency by **25%** while maintaining clean, modular code standards.
- Collaborated in an **Agile/Scrum environment** with designers, backend engineers, and QA teams; contributed to **code reviews, sprint deliveries, and production releases**, ensuring stable deployments and consistent UI quality.

PROJECTS

YoutubeX - High Performance Video Platform UI

12/2025 – 01/2026

[Github](#)

- Built a scalable **YouTube-style video browsing platform** using **React.js and TypeScript**, implementing search suggestions, category filtering, and watch-page routing with **React Router**.
- Designed centralised state management using **Redux Toolkit (slices + store)** for search, categories, theme, and sidebar state, improving **state traceability and maintainability**.
- Applied **performance optimization techniques** including **lazy loading, code splitting, memoization (useMemo/useCallback)** and skeleton loaders, improving **Lighthouse performance score to 91** and reducing perceived load time by **32%**.
- Implemented **REST API integration with robust error handling, loading states, and edge-case management**, ensuring reliable data rendering and smooth user experience.

Rizzumé.ai - AI Resume Analyser ATS Optimisation Tool

09/2025 – 10/2025

[Github](#)

- Developed an **AI-powered resume analysis tool** that evaluates ATS score, tone, and content quality, providing **actionable feedback across multiple resume sections**.
- Built a complete **file upload and processing pipeline** using **PDF parsing and image conversion (pdf2img)**, enabling structured resume ingestion and preview generation.
- Designed reusable UI components (**ScoreGauge, ScoreBadge, Summary, Detail Panels**) following **component-driven architecture**, improving UI scalability and reducing duplicate UI logic.
- Integrated **Puter API for authentication, storage, and AI feedback processing**, reducing manual resume review effort by **6+ hours/week** and improving feedback consistency by **40%**.

Dev@HimanshuOS - macOS Inspired Interactive Portfolio

01/2026 – 02/2026

[Github](#)

- Built an interactive **macOS-style desktop portfolio interface** with window management, dock interactions, and Finder-style navigation using **React and Zustand state management**.
- Engineered a modular **window management system (HOC-based architecture)** with focus stacking, drag/resize, and reusable controls, improving UI scalability and reducing duplicate logic by **38%**.
- Implemented advanced **UI animations and micro-interactions using GSAP**, including hover transitions, fullscreen toggling, and custom cursors to enhance user engagement by **22%**.
- Developed **dynamic content-driven windows (Text, Image, Gallery, Terminal)** using structured JSON data, reducing content update time by **40%** and enabling easy extensibility.

SKILLS

Frontend Core: React.js, JavaScript (ES6+), TypeScript • **State Management:** Redux Toolkit, Context API • **UI & Motion:** HTML5, Tailwind CSS, GSAP • **Styling:** CSS3, Styled Components • **Build Tools / Bundlers:** Vite, Parcel • **Testing:** Jest, Vitest, React Testing Library (RTL) • **Development Tools:** Git, GitHub, VS Code • **Deployment:** Vercel, GitHub Pages

EDUCATION

Bharati Vidyapeeth University College of Engineering
Bachelors of Technology - Information Technology

06/2019 – 06/2023 | Pune, Maharashtra
